

Illustrious Bucharest

Context

In the "Guide for Urban Situations" we explored causes, connections and possible solutions for recent challenges faced by the residents of Bucharest, relevant for young people, but also for local and national authorities. Based on the research done by our team and expertise of our partners, we have created a series of illustrations for urban situations, such as fire hazards due to improper implementation of zoning regulations, proper or improper uses of public space and the implementation of public utility works.

The visual illustrations translate the following situations:

- Abusive demolition
- Lack of transparency of public authorities
- Encroaching the public space
- Lack and poor quality of bicycle lanes
- Lack of tools for determining the owners and / or tenants to rehabilitate facades and realize interventions of building consolidation
- Quality rehabilitation for buildings
- Lack of facilities and public services
- Failure to comply with regulations on fire safety
- Car traffic prioritization instead of pedestrian routes, bicycle lanes or public transport
- Lack of accessibility of public space
- Encroaching facades of buildings with billboards
- Informality in the gathering and recycling of garbage
- The lack of correlation among intervention works for utilities

Results

25 summaries of the most common situations specific to informality Bucharest, resulted from the research conducted by our team.
